Goals

This manual describes Security Compliance measures for the GenWatch3 solution including information for iVista and Trio.

Who Should Read This Manual?

This manual is written for the intended audience of novice to mid-level Motorola trunked radio system or LTE system users and novice to mid-level PC users.

How This Manual Is Organized

This manual is organized as follows:

- **Introduction:** Provides information about the objectives, underpinning principles, and generic definitions.
- **Auditing:** Describes security compliance measures related to auditing.

This manual contains the following images, used to indicate that a segment of text requires special attention:

-  **Additional Information:** Additional information is used to indicate shortcuts or tips.
-  **Warning:** Warnings are used to indicate possible problem areas. Such as a risk of data loss, or incorrect/unexpected function.

This chapter will provide information about the objectives, underpinning principles, and generic definitions for GenWatch3 security compliance.

This chapter contains the following sections:

- **Preamble:** Describes the structure of this Security Compliance document.
- **Objectives:** Describes the goals of this Security Compliance document.
- **Definitions:** A list of terms and definitions used within this manual.

Preamble

This Security Compliance document is for GenWatch3, iVista, and Trio.

This document aims to provide compliance measures and details as it relates to security. Each section of this document contains measures pertinent to a specific security aspect, such as auditing.

Objectives

The objectives of this document are to:

- Document how the product is in compliance with various security requirements.

Definitions

GenWatch3 – Core GenWatch3 software distributed by The Genesis Group

iVista – The GenWatch3 web interface software.

Trio – A module of GenWatch3 that is the core customer billing and management functionality.

This chapter outlines security compliance related to auditing.

This chapter contains the following sections:

- **Availability:** Describes how auditing affects system availability.

Availability

Auditing measures are employed throughout the system. However, system availability is paramount to the operation of the system. As such, if resources required for auditing purposes are not available or near exhaustion, the availability of the system takes precedence and auditing events, logs, or records could be lost until those resources are restored.
