WEB-BASED REPORTING AND SYSTEM PERFORMANCE METRICS FOR AGENCIES

iVista is a browser-based dashboard KPI solution for agencies managing ASTRO® 25 and Dimetra networks and is included as a free add-on with GenWatch3. iVista delivers snapshots of key system metrics via broadband connection. Dashboard widgets can be added or removed, reconfigured, reordered and resized with simple drag-and-drop actions. Viewing additional details on a particular item is simply a double click away.

## FILTER

Each agency can independently manage specific information as if that system were all their own, empowering them with fast, efficient reporting and system performance metrics.

## SHARE

Each iVista login is designed to allow one agency or force to access its data securely. From there, data and reports may be shared as needed.

## STORE

Once reports have been generated, users may view them online and bookmark them for future viewing. Users have the option to export and save reports on a local drive as Excel® files.

## REPORT

iVista utilizes the full storehouse of Genesis' industry-standard reports to forensically analyze system activity at every level, from system-wide, down to the subscriber level.

“iVista gives reporting control back to our users, saving us time and money!”

## KEY FEATURES ROUNDUP

- ▶ Agency-specific data restricted by user login
- ▶ Login securely to view data
- ▶ Run and view reports online or on desktop
- ▶ Download and customize reports locally
- ▶ Customize and store reports online or on desktop
- ▶ Share reports via email

## THE IVISTA INTERFACE

### IVISTA DASHBOARD

The iVista dashboard displays real time and historical data via secure login. Views are customizable, including metric names, data modes, graph types, refresh intervals and more. Administrators control what data is displayed, as well as user access to dashboards.

### REPORT QUICK LINKS

Reports may be added or removed via the Report Picker and can be opened and run without leaving the dashboard.

### WIDGETS

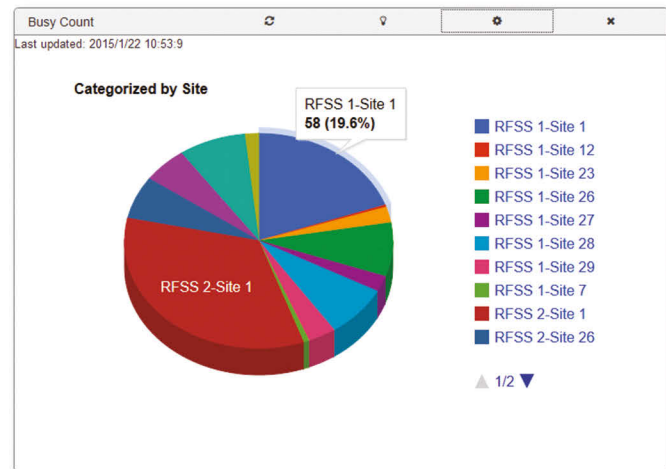

The dashboard area displays a selection of drag-and-drop widgets which show system metrics in resizable AJAX windows.

### METRIC DETAILS

The Metric Details page displays detailed real time, interactive, and statistical information about a particular piece of data.

### RESPONSIVE DESIGN

The iVista interface is fully responsive for optimal viewing on all mobile devices.
