GenWatch3® collects ASTRO 25 system information from multiple sources (ATIA, IMW, GGSN, UEM, SNMP) and produces one integrated solution that allows centralized management of all notifications, and archives data for forensic reporting and comprehensive analysis.

Managers of the world's largest ASTRO 25 systems rely on GenWatch3 to simplify reporting, validate decisions, and save time.

What about you?

SIMPLIFY REPORTING

- Every packet of data received from the ASTRO 25 network is decoded, sorted, and stored in MS SQL databases for multiple years without any loss of detail.
- Flexible MS Excel-based reporting (sort, filter, distribute)
- Web-based access to reporting
- Agency-based automatic filtering of data and reports
- Scheduled reporting
- Trend system utilization for resource planning

VALIDATE DECISIONS

- Map-based views of the radio system's performance, activity, faults, and radio GPS locations
- Historically relevant trendlines for key performance indicators
- Detailed after action analysis of every aspect of the radio system's performance
- Subscriber Access Manager (SAM) identifies and helps eliminate the threat of duplicate radios. SAM monitors resources (groups and radios) for suspicious or unlikely activity

SAVE TIME

- Manage by exception, rather than one event at a time. GenWatch3 provides at-a-glance information, not just data
- Trigger notifications alert users of activity (or absence of activity) via SNMP, audio-visual alerts, text messages, and email
- GenWatch3 consolidates disparate ASTRO 25 data streams (ATIA, UEM, IMW, and GGSN) into one central location
- Filtered agency-based login for dashboards, maps, and reporting
