

GenWatch ATIA

Performance Management for ASTRO® 25 Systems
SIMPLIFY REPORTING • VALIDATE DECISIONS • SAVE TIME

SAVE TIME & VALIDATE DECISIONS

GenWatch monitors real-time radio system activity, including mobility, busies, site usage, and channel usage. Live views display system-wide information in various ways, such as map-based site performance indicators, channel activity display, activity display, site drill-down, radio quick search, and live weather layers.

Radio System Managers can identify system performance anomalies quickly and proactively to address potential issues. The Key Performance Indicator Dashboards calculate historical averages for timely trend analysis and comparisons. Critical system event notifications can also be created and automatically sent to key personnel.
