

GENWATCH DATA WAREHOUSE

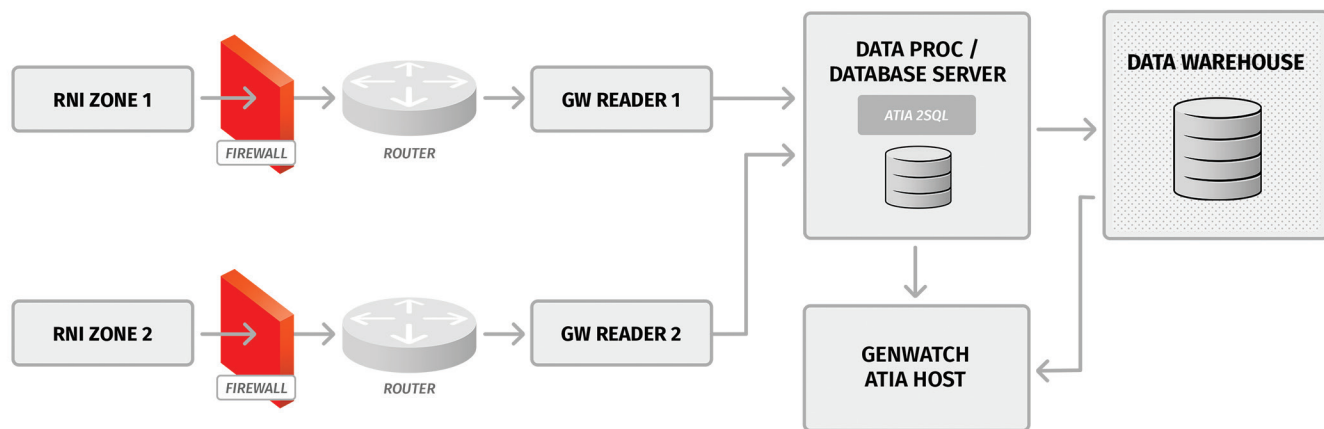

FOR ASTRO 25® AND DIMETRA NETWORKS

The GenWatch Data Warehouse solution optimizes multi-zone two-way network analytics by consolidating data into a single, centralized storage archive. With GenWatch Reports, data is available on demand for viewing and analysis.

WHY ADD A DATA WAREHOUSE?

- Large repository that provides additional long-term storage of system data
- Syncs with the Database Server to pull older data (90+ days) for query optimization
- Stores all data for long-term periods, so short-term reports run more efficiently
- Data is synced from Database Server every 24 hours
- GenWatch Reports available on demand
- Provides a layer of data redundancy in an alternate location
- Improves Database Server efficiency
