# Genesis  Mcmtech

## ENHANCE PROVISIONING • SAVE TIME • OPTIMIZE WORKFLOWS

The partnership between Genesis and Mcm**tech** enables Motorola Radio System Managers to manage their assets and various system applications through a single data entry point to the Provisioning Manager and securely exchange information.  This eliminates the need for duplicate data entry into multiple sources.

This powerful integration between Mcm**tech** and Genesis is utilized for asset and fleet management, remote radio provisioning and billing.  Radio System Managers can optimize workflows by sending data from Mcm**tech** Asset Management through Genesis GenWatch3 to the Motorola Provisioning Manager. It also allows for more people to update the asset management system while maintaining control on who can access the Provisioning Manager.

Integrating the GenWatch3 Provisioning Manager Interface Enhancement and the Genesis Interoperability Information Broker (GenIIB) with the Mcm**tech** Radio Activity Manager, Mcm**tech** Comm**assett** and Mcm**tech** Comm**shop** Asset Management Solutions for information sharing with the Provisioning Manager.
